

# CSC840 Lab 14 – Security First Principles Review

At this point, you've developed your own security first principles module, instruction, and assessment. This lab will be an opportunity for you to give feedback on someone else's work.

## Instructions

You are the student/reviewer! In this lab, you'll go through and evaluate the work of another one of your peers. Your review will *not* impact the other person's grade in any way.

1. You have been automatically assigned a group number in D2L. This number will identify what set of files you will review.
2. Download your corresponding set of files from D2L.
3. Go through the entirety of the module files that you downloaded with a reviewer's mindset. Consume the instructional materials (slides/videos/etc.), review the associated lab document (actually go through it), and then evaluate the assessment against the intended learning objectives.

## Guidelines

- Be professional, thorough, and concise.
- Give honest and constructive feedback. Key into things that you liked and also give some suggestions on how to better improve the materials.
- You will rate each section on overall merit: Excellent, Very Good, Good, Fair, Poor.
- Review criteria can be just bullet points to address positive aspects, concerns, and issues.
  - Prefix your statements with (+) and (-) to indicate strengths and weaknesses for your bullet points:
    - (+) Strength 1
    - (+) Strength 2
    - (-) Weakness 1
    - (+) Strength 3
    - etc...
- Should be about 1 page in length, more or less as appropriate.

## What to Submit

Turn in your completed review form to the D2L dropbox.
